

Horticultural Spraying Solutions

## Empas electrically rollable hose reels

A large range of electrically rollable hose reels with remote control will be at your disposal.

Available in a 230 volt, a 400 Volt or a 24 Volt DC edition, moveable or, as displayed on the picture, suitable to be assembled onto a spray cart. These built-up reels can already be assembled at the rear of a spray cart with a tank content as from 200 litres.

Available with electronic or mechanic speed regulation, mechanic hose conductor etc. The winding speed of all models of electric hose reels is stepless variable from 5 to 60 metres per minute.

In case of hose reels with mechanic speed regulation, speed control may also be provided. The speed control will ensure that the winding speed will automatically be adjusted, depending on the amount of the hose on the reel.

All electrically driven hose reels are in a standard manner delivered with an FM transmitter with a reach of at least 100 metres.

## Empas spring hose reels

The Empas auto-rollable spring hose reels are constructed in a very compact manner and are equipped with a high impact powder coating. Because of the sophisticated spring construction this reel runs particularly light. By means of the turnable hose conductor, positioned on all spring reels, the direction of the run can be selected. The hose conductor will take care of a good distribution of the hose on the reel.

In a standard manner the reel is manufactured with a swivel coupling equipped with a stainless steel pin. To render use of the reel as easy as possible and to reduce the load of the elasticity during the work a strong belt and a supple coupling hose are also provided.

This reel will, in a standard manner, be delivered with, as desired, a 30, 40, 50 or 60-metre 3/8" nylon hose with an operating pressure up to 100 bar.
