## High pressure hose reels with axial transit

Empas has an extensive programme of manual hose reels in various sizes and models.

The standard hose reel model (reel width 300 mm) can easily be assembled at the rear of each Empas spray cart. The solid construction of the reels and the powder coating ensure that these reels will last for many years. The improved swivel coupling with stainless steel pin again emphasises the quality of these reels. Operating pressures up to 200 bar are no problem at all for these reels.

We manufacture the reels in various sizes. All reels are equipped with a bolt and safe tying on three locations, a hand crank and an assembly leg. All hose reels can be assembled onto a movable frame. These frames will, when desired, be delivered with pneumatic tyres or solid rubber wheels and are equipped with a push or pull boom.

The reels of the standard edition (300 mm) are suitable for the following hose lengths:  
± 70-metre hose 3/8" external Ø 19 mm  
± 50-metre hose 1/2" external Ø 22 mm  
± 40-metre hose 3/4" external Ø 25 mm
