Built-up hoist spray systems

The Empas built-up spray systems for tractors are equipped with a polyethylene tank and have a slanting bottom as a result of which the liquid will flow to the deepest location of the tank. As a result hereof, even if the tractor would be positioned in a crooked manner, the pump will be able to suck all of the liquid.

This type of machine is available with a 200, 300, 400, 500 or 600-litre storage tank. As the built-up spray is manufactured of powder coated steel a long life cycle will be guaranteed.

In a standard manner these machines will be manufactured with:

- A control group operable from the tractor
- Level hose with little marker ball
- 16-litre clean water tank with drain tap integrated in the large tank
- Strainer tray in the filling hole
- Lockable filter box which enables the filter being cleaned with a full tank
- Hose hooks
- Universal joint haft

Optional features are: a filling pipe, an injection nozzle, an auto-filler, a manual, spring or 24V electric hose reel.

This machine is also available with a spray boom with a spray width of 6, 8, 10, 12 or 15 metres. To be able to adjust the height of the spray boom more easily such may be manufactured with a sash window with a hoist.
