

Horticultural Spraying Solutions

Vertical spray masts

The Empas spray masts meet all demands and requirements of the present-day spray technique.

Available with various wheel and pipe frames. Empas spray masts are in a standard manner manufactured in stainless steel and are suitable for vegetation up to a height of approximately 350 centimetres. By means of a built-in locking system the cap may be adjusted, in addition to the locked position, to five different positions. By means of the bayonet fitting the spray nozzles may quickly be replaced and the spray nozzles will automatically be assembled in the correct position. Mistakes are out of the question.

A list of the significant advantages of the Empas spray cap:

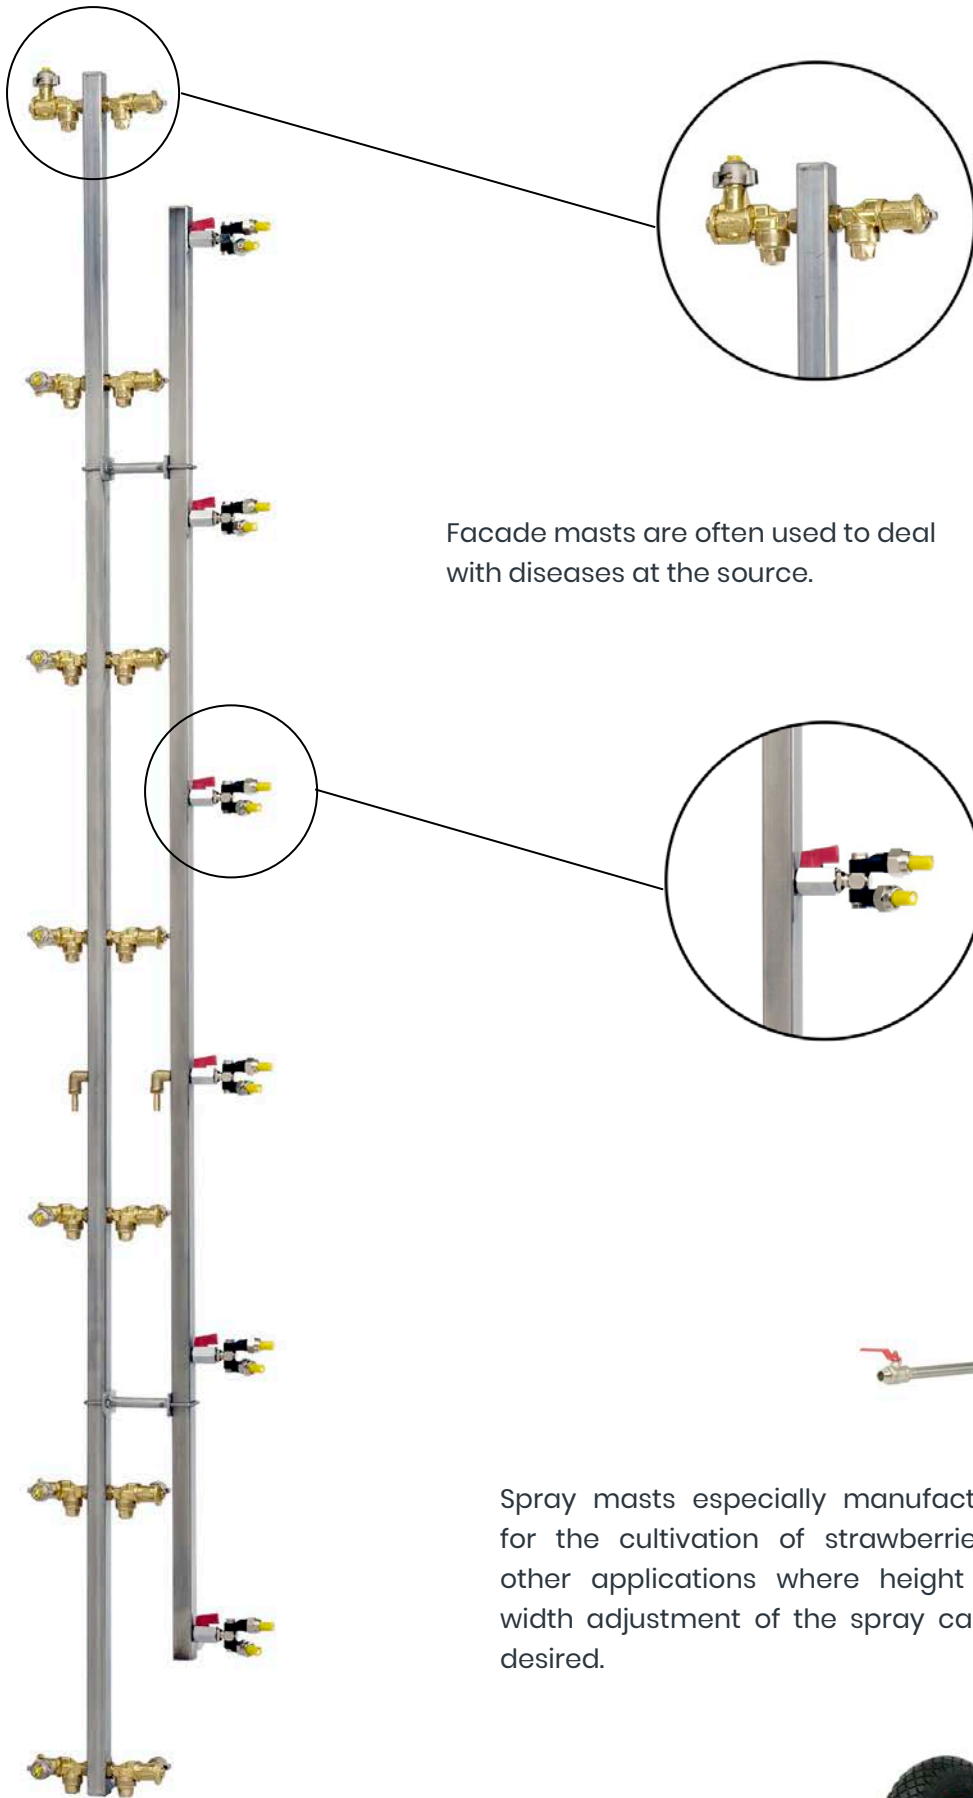

- Completely brass spray cap
- Viton blockage
- Alumax tee-jet nozzle in position
- Every cap is separately lockable
- Very accurate position setting
- Membrane valve
- Competitive price

We deliver adjusted spray masts on request, prices on request.
